A Cat® tractor can weigh more than 100 tons. And for more than a century, freight trains have been carrying Cat machines across the country. Yes, it's a heavy lift, but nothing compared to helping move the U.S. economy.

And that's what America's freight rail companies do. Every year they invest billions of their own dollars—not taxpayers' money—to build and maintain a world-class system that keeps America's commerce moving. Sometimes 100 tons at a time.
